

The HPV Vaccine

in the Sidney Kimmel Cancer Center catchment area

Among residents aged 18-45 who live in the catchment area

6 out of 10 individuals believe that they are *not* likely to contract HPV in their lifetime, while statistics show that **80%** of adults *will* contract HPV

Individuals with at least a 4-year degree were more likely to have heard of both HPV and the HPV vaccine

74.9% of white individuals reported being aware of the HPV Vaccine

white only

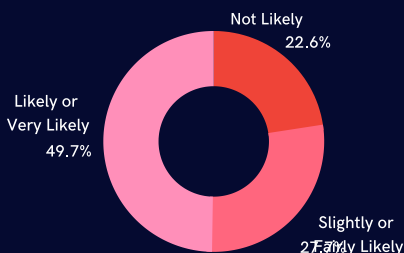

53.8% of African American individuals reported being aware of the HPV vaccine

Females were more likely than males to have heard of HPV

Females were **TWICE** as likely as males to have heard about the HPV vaccine

Only **HALF** of individuals said they were *likely* or *very likely* to get the vaccine if it were provided at no cost
